

Description

The *Premium 3D Printer Filament—PLA* is made of high purity polylactic acid (PLA) pellets with a tight diameter tolerance.

Applications & Usages

The PLA filament is the optimal choice for use in homes, schools, and hobbyists. A heated print bed is not required and when properly utilized, faster print speeds and lower layer heights can be achieved.

Benefits and Features

- 1.75 mm and 3.00 mm diameters
- Low diameter variance
- Vivid and unique colors such as Skin, Gold, Silver, Glow in the Dark, and so on

3D-Filament Processing Parameters

Processing Parameters	Temperature ^{a)}
Working Temperature	210—220 °C [410-428 °F]
Bed Temperature	Not Required

a) Values may vary depending on the printer type, environmental conditions, and color of filament. Adjust print temperatures by 5 °C until ideal flow and bed adhesion is obtained.
